List of Residents Spoken to:

During our site visit we spoke with the following Village of Trumansburg and Town of Ulysses residents about their drainage issues at and around their properties.

- 111 Larchmont Dr
- 106 Larchmont Dr
- 112 Larchmont Dr
- 118 Larchmont Dr
- 4074 South St Ex.
- 4144 South St Ex.
- 4170 South St Ex.

Preliminary Design Solutions:

After the on-site field investigation and survey, the information was recorded and brought back to our office for review. After completing our preliminary review, we have concluded that there are 3 feasible options for the project.

1. Pipe network at the rear (south) of the Larchmont Drive properties.
2. Pipe network at the front (north) of the Larchmont Drive properties.
3. Design changes to the pond located on 335 Pennsylvania Ave and 4196 South St Ext.

Option 1- Storm Pipe Installation along Rear of Lots at Larchmont Drive**Pros:**

- Give a defined route on drainage from problem area to outlet.
- Pipe is located at the rear of property, rehabilitation of construction area will have minimal cost.
- Pipe in rear allows residents to tie in residentially owned/maintained trench drains on individual properties to the pipe allowing for better drainage in backyard pooling areas. Residents would be responsible for installing/maintaining their own drainage infrastructure on their property.
- Limited construction will occur on Town of Ulysses land.

- Design can utilize existing south pond for large storm overflows. Use of this overflow
- Utilized existing stormwater piping/direction and drains stormwater flow from the natural low spot.

Cons:

- Option does not remove water before getting to backyard of southern properties on Larchmont Drive (106, 110, 112, etc.). Collecting water per option 2 at roadway minimizes volume of water conveyed to backyard lots.
- Will include tree removal and possible conflict with underground telephone utility that will need to be coordinated during design.
- Stormwater will have to be piped, swale will not work due to grades increasing material cost of the project
- Easement along rear of properties will be necessary. If option is pursued, it would be in the village's best interest to obtain a permanent easement to allow for future access and maintenance of the pipe. Maintenance of pipe will be more cumbersome for the village as overgrowth will need to be maintained to prevent damage/clogging to the pipe.

Option 2-Storm Pipe Installation along Larchmont Drive**Pros:**

- Gives a defined route on drainage from the problem area to outlet.
- Stormwater will be piped away from the identified drainage issue area, limiting the amount of stormwater getting to that area.
- Will eliminate the 18" pipe between the property lines at the problem stormwater area. It was witnessed in the field that this pipe was reduced to a 4" pipe significantly restricting the amount of water that can be discharged. This causes water to surcharge upstream pushing the problem area to uphill properties.
- Pipe will have better slope to its outlet which will allow positive drainage for the pipe
- Drainage issue in the front of the property at 118 Larchmont will be solved due to a new pipe being proposed
- Pipe would be located in the right-of-way along Larchmont Drive until 118 Larchmont Drive. At that time, the pipe would align south towards the existing drainage swale. This approach would minimize the number of easements required (likely only 1 or 2 residents).
- Any backyard drainage related issues become responsibility of individual property owners. At that time, the village has performed due diligence to resolve the volume of water making it to the backyards from upstream drainage area.

Cons:

- Construction cost will be higher due to the reconstruction of driveways in the front of the properties and more linear feet of pipe

- Will need a drainage easement and piping from front of the property to rear between 118 Larchmont and 4074 South St Ext.
- Backyard drainage issues will be the responsibility of the residents because existing grades will not allow for gravity storm piping to connect into the proposed pipe. Should homeowners have sump pumps in their basement, they could likely be connected to the pipe at the roadway in lieu of pumping to their yards.
- Tree removal will be required in front and side yard of properties.

Option 3-Expansion of Existing Ponds

Pros:

- Flow of stormwater currently drains this way.
- Storage of stormwater is available in the southeast pond.
- Minimal construction cost for clearing existing swales and changing outfall structures.

Cons:

- Both ponds are on private property within the Town of Ulysses. Control of outcome is limited compared to option 1 and 2. Village would be relying on others and maintaining or obtaining an easement for this option would be more involved.
- There is minimal grade from the existing low point of the stormwater issue and the inlet to the northern pond. During design it may be determined that significant fill may be required to be brought into the backyard properties to promote positive drainage. Evaluating how raising grades will impact each individual property may be extensive and should not be considered as a viable option.
- Construction cost is relatively unknown until evaluation of the ponds could be performed. If pond needs to be expanded after detailed investigation of stormwater in that area, Town residents may oppose the project or be wary of impact to their property.
- Increase in engineering design efforts to confirm pond sizing can hold additional stormwater.

Drainage Area Outlet Improvements:

All three options will need to include an improvement to the existing pipe outlet that runs under South Street Extension. The existing 24" CMP pipe is in good working condition. The outfall area has signs of erosion and should be repaired and improved during the construction of this project.

Preliminary Cost Estimate:

Full Environmental Assessment Form
Part 2 - Identification of Potential Project Impacts

Project :

Date :

Part 2 is to be completed by the lead agency. Part 2 is designed to help the lead agency inventory all potential resources that could be affected by a proposed project or action. We recognize that the lead agency's reviewer(s) will not necessarily be environmental professionals. So, the questions are designed to walk a reviewer through the assessment process by providing a series of questions that can be answered using the information found in Part 1. To further assist the lead agency in completing Part 2, the form identifies the most relevant questions in Part 1 that will provide the information needed to answer the Part 2 question. When Part 2 is completed, the lead agency will have identified the relevant environmental areas that may be impacted by the proposed activity.

If the lead agency is a state agency **and** the action is in any Coastal Area, complete the Coastal Assessment Form before proceeding with this assessment.

Tips for completing Part 2:

- Review all of the information provided in Part 1.
- Review any application, maps, supporting materials and the Full EAF Workbook.
- Answer each of the 18 questions in Part 2.
- If you answer “**Yes**” to a numbered question, please complete all the questions that follow in that section.
- If you answer “**No**” to a numbered question, move on to the next numbered question.
- Check appropriate column to indicate the anticipated size of the impact.
- Proposed projects that would exceed a numeric threshold contained in a question should result in the reviewing agency checking the box “Moderate to large impact may occur.”
- The reviewer is not expected to be an expert in environmental analysis.
- If you are not sure or undecided about the size of an impact, it may help to review the sub-questions for the general question and consult the workbook.
- When answering a question consider all components of the proposed activity, that is, the “whole action”.
- Consider the possibility for long-term and cumulative impacts as well as direct impacts.
- Answer the question in a reasonable manner considering the scale and context of the project.
